

# The Molecular Biology Society of Japan

## MBSJ Annual Meeting

In the MBSJ Annual Meetings, held every winter, approximately 3,000 presentations are given, and the number of participants exceeds 7,000.

## Genes to Cells

Our academic journal, *Genes to Cells*, provides an international forum for the publication of papers describing important aspects of molecular and cellular biology. The journal presents papers that provide conceptual advance in the relevant field. Particular emphasis is placed on work aimed at understanding the basic mechanisms underlying biological events.

## Lecturer introduction to high School

We are trying to introduce MBSJ members to highschool students so that they have opportunity to experience for latest biology. MBSJ regular members, most of them are 'professional' scientists with ph.D or MD, who belong to lab in universities, research organizations, or companies. They visit high school for free and give lectures. They enthusiastically tell highschool students how it is interesting of the world of biological science.

### Secretariat Office of MBSJ

Address: Jinzai Kaihatsu Bldg. 4F, 2-11-5 Iidabashi, Chiyoda-ku, Tokyo 102-0072 Japan

The Molecular Biology Society of Japan (MBSJ) was established in 1978 by nearly 600 members. Since then, it has grown to encompass nearly 13,000 members, making it Japan's largest biological society.

MBSJ was founded with the objective of making molecular biology a common language for borderless discussion.

*"As the process of learning advances, there is a tendency for increased specialization and differentiation within each field, but . . . the objective of MBSJ is to create truly multidisciplinary-based life science by incorporating a diverse range of researchers that will both collaborate and continue research in their respective specialized fields."*  
[excerpt from MBSJ's founding letter of intent, 1978]

We feel it is exactly this multidisciplinary and free atmosphere that encapsulates the identity of MBSJ and it may also be the unifying force that attracts scientists from various fields.
